Aluminum Industry

09/01

A major Canadian diecasting facility recently repaired one of their key aluminum holding furnaces using Thermbond® Formula Series products. Small scale test and development installations in this shop emphasized Thermbond's:

- 1) Ability to bond to an existing lining so you can "save the backup".
- 2) Fast setting and curing to get the furnace "back to production".
- 3) Non wetting to eliminate corundum buildup that reduces furnace volume, wastes energy and destroys your refractory lining.

YOUR PERSONNEL & FURNACES DESERVE THERMBOND®!!!
